

Product Specification Sheet

Fitted Pleated Table Covers

Fitted Pleated Table Covers are tailored 600D PU polyester covers with decorative pleats sewn into the skirt panels, printed full-color using dye sublimation at 300 DPI. They fit 4 ft, 6 ft, and 8 ft standard folding tables and suit formal events where the table cover contributes to room decor as much as branding.

Material

600D PU Polyester.

600D refers to denier, a thread-thickness measure. Higher denier means heavier, more durable fabric with a water-resistant PU coating.

Print Method

Dye sublimation at 300 DPI.

Ink bonds into the polyester fibers under heat, so graphics cannot crack, peel, or fade the way surface-applied ink does.

Color Output

Full color, no spot-color limits.

Gradients, photographs, and multi-color logos all print accurately across every panel.

Finishing

Hemmed edges. Sewn fitted corners. Decorative pleats sewn into skirt panels before printing.

Pleats are structural, so they hold their fold lines through washing and transport.

Size Range

Fits 4 ft, 6 ft, and 8 ft standard folding tables. Round table options also available.

You must select your exact table size at checkout. Fitted covers are not forgiving of size mismatches.

Indoor/Outdoor Rating

Indoor use and light outdoor use in covered or sheltered settings. Colors rated for 50 or more machine wash cycles without noticeable fading.

Not rated for sustained direct rain or heavy outdoor wind exposure.

Coverage Options

3-sided open back (front plus two sides) or 4-sided fully enclosed. Zipper option available on 4-sided.

The zipper lets staff access under-table storage without removing the cover.

Weight

Roughly 2 to 4 lbs depending on table size.

The 4 ft cover sits at the lighter end. The 8 ft cover sits at the heavier end.
