

Product Specification Sheet

Convertible Table Covers

Convertible Table Covers run on 600D PU polyester with built-in Velcro tucks or snap folds that adjust the same cover between two table sizes. They're built for multi-event vendors and exhibitors who can't justify buying and storing two separate covers. Full-color dye sublimation keeps graphics bold and readable across a full event season.

Material

600D PU polyester. 600D is the denier count (a measure of thread thickness). PU is a polyurethane coating that adds water resistance and durability, and resists wrinkles through repeated folding and transport.

Print Method

Dye sublimation at 300 DPI. Ink converts to a gas under heat and bonds directly into the fabric fibers, so the print cannot crack, peel, or wash off.

Color Output

Full color across all printed panels. Colors stay bold and readable after 50 or more machine washes because the ink embeds into the fibers rather than sitting on top.

Finishing

Hemmed edges on all sides. Hemming stops fraying and keeps the drape hanging straight to the floor without curling at the corners.

Size Range

Adjustable between 8 ft and 6 ft, or between 6 ft and 4 ft. The adjustment mechanism switches sizes in roughly 30 seconds without tools.

Indoor/Outdoor Rating

Indoor use and light outdoor use. The PU coating handles light moisture at vendor booths. Avoid sustained rain without overhead shelter.

Coverage

3-sided open back or 4-sided fully enclosed. The 3-sided option leaves the back open for staff access to storage under the table.

Fit

Standard loose drape. The cover drops over the table and hangs to the floor on all covered sides, not hugging the corners the way a fitted cover does.
