Product Specification Sheet

10 ft x 10 ft L-Shape Magnetic Modular Fabric Display

The 10 ft x 10 ft L-Shape Magnetic Modular Fabric Display runs on an aluminum tube frame with magnetic joints and 240g flame-retardant tension fabric printed double-sided via dye sublimation. It's built for corner booth assignments where both aisle-facing walls need full graphic coverage. The frame, the fabric weight, and the double-sided print work together so the display functions as a complete two-wall branded environment. Not just a backwall with an added panel.

Material

Flame-retardant 240g tension fabric (tightly woven polyester rated to resist ignition).

The 240g weight blocks light bleed between layers so front and back graphics read as separate, bold images.

Print Method

Dye sublimation (ink bonded into fabric fibers under heat).

Color won't crack, peel, or fade across repeated show setups and takedowns.

Color Output

Full-color custom print, front and back on both wing panels.

Your artwork fills the complete L-shape surface with no borders or blank zones on either side.

Finishing

Pillowcase-style fabric sleeve (a zippered fabric cover that slips over the frame so no hardware shows on the finished display).

The zipper runs along an edge where it stays out of the sightline from either aisle.

Size

10 ft x 10 ft footprint covering a standard single corner booth assignment.

Each wing of the L covers one wall of the corner.

Indoor/Outdoor Rating

Rated for indoor use at trade shows, conferences, and expos.

The flame-retardant fabric meets most indoor venue fire codes. Not rated for prolonged outdoor or weather exposure.

Single/Double-Sided

Double-sided print on both wings.

Graphics read correctly from every approach angle around the corner, inside and outside.

Frame

Aluminum tube frame with tool-free magnetic joints.

The aluminum keeps the overall kit weight manageable for carry-in setup without a crew.
