

Product Specification Sheet

10 ft x 10 ft U-Shape Magnetic Modular Fabric Display

The 10 ft x 10 ft U-Shape Magnetic Modular Fabric Display is a three-sided enclosure built for indoor trade show environments. It runs on an aluminum magnetic frame with 240g flame-retardant tension fabric printed double-sided by dye sublimation. Exhibitors who run demos or private conversations inside a standard 10 ft booth assignment get the most from this configuration.

Material

Flame-retardant 240g tension fabric (tightly woven polyester rated to resist ignition).

Stretches over the aluminum frame under constant pull, giving each wall a smooth, wrinkle-free face.

Print Method

Dye sublimation.

Ink bonds into the fabric fibers as heat-activated gas, so color won't crack, peel, or fade.

Color Output

Full-color, both faces of every wall panel.

Bold graphics and fine text read clearly at close range inside and from the aisle outside.

Finishing

Pillowcase-style sleeve (a fabric cover that zips around each frame section).

Graphic wraps the frame with no exposed edges or visible seams on any wall.

Size

10 ft x 10 ft footprint. Three walls form a U-shape with one open side facing the aisle.

Fits a standard single booth assignment at most indoor trade shows.

Indoor/Outdoor Rating

Indoor use only. Typical display life runs well beyond a single show season with proper storage.

The 240g fabric and aluminum frame are not rated for outdoor weather exposure.

Single/Double-Sided

Double-sided on all three wall panels.

Side walls brand the aisle approach from outside; the back wall faces inward toward the demo area.

Frame

Aluminum tube frame with magnetic joints.

Same frame sections reconfigure across compatible shapes in the magnetic modular line without additional hardware.
