Product Specification Sheet

13 ft x 13 ft X-Shape Magnetic Modular Fabric Display

The 13 ft x 13 ft X-Shape Magnetic Modular Fabric Display is a four-fin island structure built for center-floor booth assignments open on all four sides. Every fin panel runs 240g flame-retardant tension fabric printed double-sided by dye sublimation. This display suits island exhibitors who need 360-degree branded coverage without tools or a long setup window.

Material

Flame-retardant 240g tension fabric (tightly woven polyester rated to resist ignition).

Meets fire safety requirements most convention centers and expo halls enforce for island displays.

Print Method

Dye sublimation.

Ink converts to gas under heat and bonds into the fabric fibers, so the image won't crack or peel.

Color Output

Full-color, front and back on all four fins.

Every branded surface reads with the same color depth from roughly 5 ft or 50 ft away.

Finishing

Pillowcase-style sleeve (a fabric cover that zips around each frame section).

No visible hardware interrupts the graphic surface on any of the four fins.

Size

13 ft x 13 ft footprint.

Fills a standard large island booth assignment and leaves about 2 to 3 ft of walkable clearance inside each fin approach.

Indoor/Outdoor Rating

Indoor use at trade shows, conferences, and expo halls.

Flame-retardant fabric meets typical venue codes. The aluminum frame holds its shape show after show.

Single/Double-Sided

Double-sided on all four fins.

Every face of the X-shape carries a full graphic regardless of which direction an attendee approaches.

Frame

Aluminum with magnetic joints, tool-free assembly.

Two people raise and break down the sturdy structure quickly, with no loose hardware to misplace between shows.
